14．The doctor made a judgement that the boy would make a quick _____ (recover).

15．It is estimated that 10,000 dollars had been spent on _____ (agriculture) research.

Part ll Reading Comprehension

Passage 1

Growing Hope

For most Chinese people, rice is an important part of almost every meal. But for Yuan Longping, rice was more than that. It was his life-long career (职业). Yuan Longping, known as China's "father of hybrid rice (杂交水稻)", created hybrid rice that helps feed the world. On May 22, Yuan died at 91. People around the world were sad to hear of his passing.

How did he begin?

In the 1960s, people in China didn't have enough food to eat. Many people even died because of this. Yuan was sad to see this. At that time, other scientists didn't think hybrid rice had much value. But Yuan worked on it every day. He took very good care of his rice seeds.

At last, in 1973, he grew a new type of hybrid rice. This rice is different from other kinds of rice. Farmers can grow it in many different kinds of farmland and also in bad weather. It can fight disease, too. With the new type, about 70,000,000 people could have food every year!

Home on the farm.

Yuan was a famous scientist. But he called himself a farmer. He spent most of his time in the field. Yuan himself also said, “If I am not at home, I must be on the farmland; if I am not on the farmland, I must be on my way to the farmland.”

Praise for Yuan.

In 1991, the United Nations invited Yuan Longping to work as its chief consultant (首席顾问). He traveled to many foreign countries to share his knowledge of hybrid rice. Professor Yuan made such a powerful contribution (贡献) and people will remember him forever.

16．What did Yuan Longping create?

He created _____.

17．When did Yuan Longping grow a new type of hybrid rice ?

He grew a new type of hybrid rice _____.

18．How is hybrid rice different from other kinds of rice?

Farmers can grow it _____ and also in bad weather.

19．Where did Yuan Longping spend most of his time?

He spent most of his time _____.

20．Why did Yuan Longping travel to many foreign countries?

He traveled to many foreign countries to _____.

Passage 2

DNA is the whole “map” of the human body. It is something that all humans have, and it tells the body what to do. DNA is the reason why we look like our parents, because we get some of their DNA to make our own.

People have been trying to understand the human body for a long time. In 1860, Mr. Mendel discovered why we look similar to other people in our family. It is because of small things called “genes” in our body. In 1953, two scientists, Watson and Crick, found out that those small parts are real messages. They are written in the DNA with a special language.

In 1961, another two scientists found the first “word” that they could understand in that language. It shows how DNA tells the cell (细胞) to build its parts. So far, scientists have found all the words in the DNA map, but we do not understand what they all do. By under standing what just one “word” means, we can help to save people from several illnesses.

Most people hope that this will help to make better medicine to help sick people. Other people worry that when we learn more “words” and find out more information, we will use it in the wrong way, just to make people more attractive, or stop sick people getting jobs. It can be good or bad for people.

21．Why do we look like our parents?

Because we get _____.

22．Which word means “基因” in the second paragraph?

It is “_____”.

23．What did the two scientists find in 1961?

They found _____ in that language.

24．How can we help sick people if we understand more “words” in the DNA map?

We can help sick people by _____.

25．What can we know from the last paragraph?

The discovery of DNA can be _____ for people.

Passage 3

Last Sunday was the official (官方的) birthday of the world’s oldest land animal. Jonathan, a Seychelles giant tortoise (巨型陆龟) living on the island of Saint Helena, turned 192 years old. People held a big party to celebrate his birthday.

Nobody knows for sure how old Jonathan is. But in 1882, he was brought as a gift to Sir William Grey-Wilson, who lived in Saint Helena. Pictures taken around that time show that Jonathan was already full-grown.

Since it takes about 50 years for Seychelles giant tortoises to become adults, animal experts say Jonathan may have been born in 1832. That won him the Guinness World Record for the world’s oldest land animal.

In 1890, Sir Grey-Wilson became the governor (总督) of Saint Helena. He brought Jonathan

along with him to live at the governor's home, called Plantation House. Since then, over 30 other governors have come and gone from Plantation House. But Jonathan has always been there. Now, there are three other giant tortoises there staying with him.

Seychelles giant tortoises are known for living a long time. One tortoise was report-ted to have lived for 255 years. Joe Hollins, the veterinarian (兽医) who looks after Jonathan, says Jonathan is probably older than 192, but there's no way to know. To help keep things straight, Saint Helena's current (现在的) governor, Nigel Phillips, gave Jonathan the official birthday of December 4, 1832.

26．How did people celebrate Jonathan's 192nd birthday?

_____

27．Which year was Jonathan probably born according to the passage?

_____

28．How many giant tortoises are living at Plantation House now?

_____

29．What does Joe Hollins do?

_____

30．Who set the official birthday of Jonathan?

_____

Passage 4

There are far too many mysteries in this world that we have yet to discover.

In a small town of Gryfino in Poland lies one of the world's unanswered mysteries. There is a small group of pine (松树) trees with a strange shape. From the bottom, these trees grow with a 90-degree sharp bend (弯曲) northwards, but then go back to grow straight up into the sky. People call the area the Crooked (弯曲的) Forest for their look.

According to the scientists, the pine trees there were planted in around 1930. Though they are strange in shape, these trees are generally healthy and can grow nearly 15.24 meters.

Nobody knows exactly what happened to the pine trees in this strange forest. But there are still many guesses at the mystery. Some suppose that the gravity (重力) in this area has caused the trees to grow bent northwards. But it seems that this guess isn't so forceful, because gravity only

pulls things downwards and doesn't make them bend. Others guess that the heavy snowfall in the area weighed down the trees as they were small. However, if that is the case, how would they explain the other normal trees in this area? Another guess is that it may be the work of aliens (外星人). This is the most interesting but also the most impossible reason. Probably they have watched too many science fiction movies before. The most widespread and most probable reason is that local farmers shaped the trees when planting them then. During those times, it was common for farmers to shape their plants for special purposes. For example, these strange-looking trees might be used as ship-building materials.

However, there is no evidence (证据) to support any of the guesses. The secret behind the Crooked Forest is still waiting for us to discover.

31．Where are the pine trees with a strange shape?

_____

32．When were the pine trees planted?

_____

33．What do the pine trees look like?

_____

34．How many guesses does the passage mention about the mystery?

_____

35．Do you think the writer agrees with any of the guesses? Why or why not?

_____

Passage 5

You probably have heard of the Four Great Inventions of ancient China which brought great changes to the world in the past. Now, China's four great innovations (革新) in modern times are widely known among people from all over the world.

Online shopping is really convenient for Chinese people. From clothes to foods, from physical goods to virtual products, you can buy almost anything online. The popularity of online shopping has made the express delivery (快递) industry develop quickly. People can get the things they buy online in only two or three days after placing the orders, and it saves them a lot of time.

In Western countries, people usually pay by credit (信用) card or in cash (现金). But in China,

more and more people, even old people, like to pay for things with their phones. Since the day mobile payments got popular in China, many Chinese people's wallets have been empty with only a few coins in them, which were left probably a few months ago.

Shared bikes are "the perfect first & last mile solution" for people. It's very convenient to use a shared bike without worrying about where to park it. Although it caused a lot of problems at first, most of them were solved with the help of the government.

China has the largest high-speed railway network (网络) in the world at present. The construction of high-speed railway in China has made great progress in the past 15 years. Some of the railways were even built under extreme natural environment. Chinese people are getting great benefits from the high-speed railway.

China's four great innovations in modern times	
Introduction	The Four Great Inventions of ancient China changed the world 36 in history, and now the world's attention is attracted by four innovations in modern China.
Online shopping	People can buy almost anything online. The popularity of online shopping has pushed the 37 of the express delivery industry.
Mobile payments	Different from people in Western countries, more and more Chinese people like to pay on their 38.
Shared bikes	Shared bikes are convenient. People don't need to 39 about where to park them.
High-speed railway	The high-speed railway network in China is 40 than that in any other country.

Part lll Error Correction

41. All medicines should are stored away from moisture, direct sunlight, and heat.（ ）____

A B C D

42. The teacher looked at these students, seeing that one boy crying at that moment. （ ）___

A　　B　　C　　D

43. Last summer, I went back to mine old school, only to find the teaching buildings were gone.

（ ）____ A　　B　　C　　D

44. As soon as he opened the blue book, he knew immediate what the answer was. （ ）___

A　　B　　C　　D

45. She greatly suffered from mental pain after her cat died from a accident. （ ）____

A　　B　　C　　D

Part IV　Translation

46. 学习小蓝书不仅能够提升英语成绩，而且能够增强自信心。（blue book; grade）

_____

47.在过去的十年里，武汉新修了好几条新地铁线。（subway line）

_____

48.不可否认，成功的唯一途径是努力克服困难。（overcome）

_____

49.他曾经经常犯错，但如今他已经改掉了这个坏习惯。（get rid of）

_____

50.所有从活动中受益的人都应该感谢组织者。（organizer）

_____

51. Science has a lot of uses. It can uncover laws of nature, cure diseases, make bombs, and build bridges. Indeed, science is so good' at improving our quality of life. But at the same time, we cannot overlook the potential dangers posed by science. The abuse of scientific knowledge and technology can lead to disastrous consequences. For example, some dangerous weapons have caused great suffering and death to human beings. Therefore, we must use science wisely and responsibly. We should strive to apply scientific knowledge and technology to improve the quality of life of mankind, rather than causing harm.

_____

Part IV　Writing (10%)

Directions: *This part is to test your writing ability. Write a notice based on the information provided. Write in the corresponding space on the* ***Answer Sheet.***

52. 假定你是 Ben，下周末你们公司将举办首届生活技能云端展示活动(online life skills show)，主题为“劳动创造美好生活”。请你写一篇通知，内容包括：

1.活动主题及目的；

2.活动意义。

注意：

1.词数不少于 80；

2.可以适当增加细节，以使行文连贯。
