15．Don't go to the cinema this afternoon, and you should finish your work first. I would rather you _____ (go) tomorrow.

Part II　Reading Comprehension

Passage 1

I have a big birthmark (胎记) on my face. But I don't consider it a big problem. Instead,

I think it's something that makes me unique and memorable.

I especially admire a person called Joseph. He had a life which was full of hardships, from being sold as a slave by his brothers to being wrongfully accused and jailed in Egypt. And through it all, he kept his uniqueness, shared his talent and uplifted those around him. In my opinion, that he was able to rise to become an important official in Egypt was exactly because he could learn from his hardships and turn them into his advantages. They gave him the gifts of perseverance and bravery to stick to his faith and face any challenges that stood in his way.

Each of us has our struggles and pains in life, those things that we think hinder us from reaching greater heights. But what is important is that we know strength and beauty lie in the struggles, in overcoming hardships and in being open to people about your struggles.

When I meet someone, I try telling them, "The birthmark on my face makes me different, and would you mind my condition?" and with those few words, I show them that I have something special and I don't avoid talking about it. Try that for yourself. Put the challenge up front so that you can put it aside from the start.

I hope this story of my struggle and the strength it has given me can add value to your life as well. We are on this journey of life together. With resilience and kindness, we can add light to our lives and the lives of those around us every day.

16．How does the author feel about his birthmark?

_____

17．What is Paragraph 2 mainly about?

_____

18．What does the underlined word "hinder" in Paragraph 3 mean?

_____

19．Why does the author talk to people about his birthmark?

_____

20．How does the author's story inspire you? Please explain it in your own words.

_____

Passage 2

"Someone once asked me, 'What's the tool you would want to give any student'? And I said, 'A mask and snorkel (潜水通气管) set,'" the ocean biologist Thys says in a video. And

Thys explains, “Ninety-eight percent of the living space on this planet is the ocean. It’s worth a view.”

Thys has devoted her career to seeing the ocean, and to helping others watch the great diversity of the underwater world. A big part of what motivates her work is the chance to let people develop a sense of respect for the grandness of the ocean, and to get people to participate in efforts to protect endangered ocean ecosystems.

Since studying ocean biology, Thys has focused her research on how sea animals live. One animal she particularly studies is the ocean sunfish. “It’s so different from any other fish,” says Thys. “It looks like a mistake. Where does the tail go?” Thys adds. “The sunfish provides an entry point to understanding more about the behavior of creatures in the ocean, and about how environmental changes impact underwater ecosystems.”

Thys’s work also takes her above ground, where she’s looking at ways to create new connections between human populations and natural environments to help address social and environmental challenges. For instance, she’s working on nature’s effects on mental well-being.

Thys’s passion for her work is evident in every lecture, video, and public appearance she makes. Using the media, Thys encourages people to learn about the ocean and love it. Due to many ocean research projects and activities from the media, Thys <u>is up to her neck in work</u> every day. She could hardly spare plenty of time for a good rest. Thys’s devotion to her work as an ocean scientist and ecological warrior is infectious. She’s a role model and an inspiring guide to ocean life.

21．Why would Thys like to send students a mask and snorkel set?

_____

22．What greatly motivates Thys’s work according to Paragraph 2?

_____

23．What does Thys think of the ocean sunfish?

_____

24．What does the underlined part in the last paragraph mean?

_____

25．What’s your attitude towards Thys and her work?

_____

Passage 3

Chinese culinary arts has a long history, famous all over the world. Chinese cuisine has developed and matured over the centuries, forming a rich cultural content. It is characterized by fine selection of ingredients, precise processing, particular care to the amount of fire, and substantial nourishment.

The diversity of geography, climate, costumes and products have led to the evolution of what are called the "Four Flavors" and "Eight Cuisines" but as catering is a living art sub-classifications continue to increase. Cuisine in China is a harmonious integration of color, redolence, taste, shape and the fineness of the instruments. For the cooking process, chefs pick choice and various ingredients and seasonings while employing unparalleled complicated skills handed down from their fathers, ever aspiring to their ideal of perfection for all the senses. Among the many cooking methods they use are boiling, stewing, braising, frying, steaming, crisping, baking, and simmering and so on. When they finish their masterpieces they are arranged on a variety of plates and dishes so that they are a real pleasure to view, to smell and ultimately to savor.

Beijing cuisine combines the best features of different regional styles. Shangdong cuisine leads the Northern dishes. Shangdong cooks are good at cooking seafood. Sichuan cooks specialize in chilies and hot peppers and Sichuan dish is famous for aromatic and spicy sauces. Guangdong cooking makes use of many ingredients. They look for fresh, tender, crisp textures. Huai Yang cuisine stresses the natural flavors. Dishes are strong but not greasy, and light but delicate. Tan cuisine is both sweet and salty. There is a saying that "southerners have a sweet tooth, and northerners crave salt", but Tan dishes manage to satisfy both. Because China's local dishes have their own typical characteristics, Chinese food can be divided into eight regional cuisines, the distinction of which is now widely accepted.

26. What does the underlined word " characterized" in Paragraph 1 probably mean?

_____

27. What does the passage mainly tell us??

_____

28. What caused the diversity of Chinese cuisine?

_____

29. What is typical of Sichuan dishes?

30．How do the cooks perfect their masterpieces besides cooking according to passage?

Passage 4

An 89-year-old man has reached a goal he spent 20 years working toward. He earned his doctor degree and became a physicist.

Steiner values this degree because it is what he always wanted — and because he overcame health problems that could have interfered with his studies.

As a young person in Vienna, Austria, Steiner wanted to become a physicist after reading about Albert Einstein and Max Planck.

But after World War II, his mother advised him that studying medicine would be a better choice. He earned his medical degree from the University of Vienna in 1955 and moved to the United States soon after. In the U.S., he had a successful career studying blood, became a full professor and led the hematology (血液学) department at Brown's medical school from 1985 to 1994. He helped establish a research program in hematology and directed that program until he retired from medicine in 2000.

Steiner found medical research pleasing, but it was not quite the same as his interest in physics.

"It was something like a wish that was never fulilled, that always stuck in the back of my head," he said. "Once I'm finished with medicine, I really don't want to spend my life just sitting around and maybe doing a little golfing or doing something like that. I wanted to keep active.

At age 70, he started taking undergraduate classes at Brown University. He was planning to just take a few classes that interested him. But by 2007, he had earned enough credits to join the doctoral program.

Physics professor Brad Marston soon realized how serious Steiner was about the subject and how hard he worked. "He already had a scientific way of thinking that younger students have to develop," Marston said. "One thing that's really true about Manfred is he perseveres."

After the university published a story about Steiner on its website, people across the U.S. contacted him to ask for advice on how to go after their dreams later in life.

He said his advice is: Do what you love to do.

31．Why does Steiner attach great importance to this degree?

_____

32．What is paragraph 4 mainly about?

_____

33．What does the underlined sentence in paragraph 5 mean?

_____

34．What is Marston's comment on Steiner after he joined the doctoral program?

_____

35．What do you think of Steiner? Please explain. (no more than 20 words)

_____

Passage 5

I love parties. I love planning for them, making the invitations, planning the games and decorating my own cake. The only thing that I don't like is deciding on the guest list. When I was in grade school my mum would tell me the maximum number of friends that I could invite and it was always a number too small for my list. I also liked all different kinds of people. I never quite fit into one of the many little groups at my school, so I just kind of floated around, accumulating friends from various backgrounds. There was an "in" crowd made up of the cool kids who had the power to rule the school — if a cool kid wore two different coloured socks to school one day, everyone thought it was great. But if an uncool kid did the same thing, the other kids would turn away in disgust (厌恶). It made getting dressed in the morning a very scary thing.

Shannon was one of my friends who seemed to unknowingly break the rules of uncoolness all the time. I don't know why she was often targeted, but people found it acceptable to make fun of her. Shannon was a nice girl and wore pretty clothes, but was somewhat overweight and didn't talk much. She was picked on a lot. Whenever there was an strange noise or smell in the classroom the kids would giggle (咯咯笑) and point at her. Shannon never said anything, but it made me feel sick inside. Shannon was innocent, I thought.

One year to celebrate my birthday, my mum told me I could have a party at our house. I struggled for days deciding on which girls to invite. Once I had chosen all the names, I made

the invitations and handed them out to my friends at school.

"Why did you invite Shannon?" asked one of my cool friends when it was discovered that I had invited Shannon. She pressured me to tell her not to come. If I invited Shannon, maybe I would be targeted by children's ridicule. There were other people I could add in her place who would be more acceptable.

阅读短文完成下面的表格

5W	Details
Who	Shannon was one of my friends, but she was often __36__, and they made fun of her.
When	One year to __37__ my birthday, I wanted to invite Shannon.
Where	Shannon was invited to attend my __38__.
What	One of my cool friends suggested that I should not invite __39__. I was at a loss.
Why	I was pressured. If I invited Shannon, maybe I would be targeted by the children's __40__.
