Part II　Reading Comprehension

Passage 1

What do you think is the most common illness? Do you get ill sometimes? We are lucky to live now, because there are lots of medicines to make people better.

The most common illness in the world is the cold. It often begins with a sore throat. Then you sneeze and your nose runs. You usually have a headache too. Often you cough later. It's not a very bad illness, but you can feel quite ill.

There isn't a cure (治愈方法) for a cold, but you can take medicines to make you feel

better. For instance, aspirin (阿斯匹林) can stop your headache. It is good to rest, and to drink a lot of water too. A doctor once said to me, “With the proper medicine, a cold will continue for seven days. With no medicine, it will continue for two weeks or longer!”

Where does our medicine come from? A long time ago, people in ancient times knew that some plants made them feel better. They ate the leaves, the roots, the fruit, or the seeds of plants. For instance, the juice of lemons will make a sore throat feel better.

In modern times, scientists have looked at these plants, and found out which chemicals(化学物质) are in them. Many of our medicines today are made from those chemicals.

There are some illnesses which we can’t cure yet. And nobody has found a cure for old age. But because of modern medicines, people now live longer than their grandparents.

16．What’s the most common illness in the world?

The most common illness in the world is _____.

17．According to the passage, what medicine can stop the headache?

_____ can stop the headache.

18．What does the underlined word “They” refer to(指代)?

It refers to “_____”.

19．Where do many modern medicines come from?

Many of them come from _____ in the plants.

20．Why do people now live longer than their grandparents?

Because there are _____ when they are ill.

Passage 2

When you want to buy a new T-shirt, will you pick Adidas or Li-Ning? Many people have been through（经历）these moments. These are those moments when you need to choose between local and foreign brands. But things seem clearer in these days. In fact, Chinese brands are now winning the hearts of people in China and abroad.

Time magazine shows a list of the 100 greatest companies in the world. Some Chinese companies are on the list, such as Huawei, DJI and TikTok.

For a long time, “made in China” made people think of ugly (丑的) or poor things. Now, more and more people think things of Chinese brand are fashionable (时尚的), well-made and cheap. China products are a symbol of good quality, good creativity, and good art. Here

are some examples.

Technology

Huawei is the world's second biggest mobile phone company. Its mobile phones are used in more than 170 countries. Huawei is also a leader in 5G technology.

DJI is the world's leading manufacturer of drones (无人机制造商). It produces all kinds of drones and has more than 70% of the world's drone market.

Entertainment

Do you know what the most popular App in America is? It's TikTok. It's said that about 50 million US users spend 45 minutes on it every day. People know it because it is fun and its videos seem to be endless. But it's not just a time-killer. People can buy things on it, too.

The Chinese brands will develop in a quick way. The best time for the local brands is coming.

21．What do more and more people think of things of Chinese brand now?

They think things of Chinese brand are _____, and cheap.

22．How many countries are using Huawei mobile phones?

Huawei mobile phones are used in _____ countries.

23．What does DJI produce?

It produces all kinds of _____.

24．Why do people in America know TikTok?

Because it is fun and its videos seem to be _____.

25．How will Chinese brands develop?

The Chinese brands will develop _____.

Passage 3

B站：小蓝书创作人　B站：小蓝书创作人　B站：小蓝书创作人

A while ago I sent out a couple of hundred letters for information on subjects that interest me. One of the questions I asked was "When you think of love, what color comes to your mind?"

One person said "money". I didn't know what color that was, maybe green, but I wasn't sure, so, I didn't give it a color. Two people said love didn't have any color. Two other people said love was the color of the rainbow. That's a nice thought. Now only 3 people chose red as the color they thought of as love. This surprised me, since that is the color used most on Valentines' Day (情人节). I guess passion doesn't necessarily mean love. There was a tie of 4

each for white and yellow. I can understand wanting a pure love (white) or a wise and happy love (yellow). Pink is the choice of 5 people who I think need beauty in their lives. Six people said either lavender, lilac (紫丁香) or violet was the color of love. I think all of them want some magic and mystery in their love lives. Green was the color chosen by 7 people as the color they thought of as love. These people must want a balanced love and maybe some money too.

The most surprising answer was that 14 people picked blue. I think these people may know about love. Love should be sincere and true. Maybe if you have "the blues", it is because you don't have love. Most blues music is about lost love. Maybe blue is the color of love. I just can't see sending a blue heart to my lover next Valentines' Day.

This little survey is not scientific, but it is very interesting. Did you know not all people dream in color? Well, I hope everyone makes sure to daydream in the most wonderful and wild colors possible.

26. What did the writer send out a while ago?

_____

27. Why was the writer surprised at only 3 people's choosing red?

_____

28. How many people choose pink as the color of love?

_____

29. What was the most surprising answer?

_____

30. Can the writer send a blue heart to his lover next Valentines' Day? Why or why not?

_____

Passage 4

Dr. Lin Qiaozhi graduated from Peking Union Medical College (PUMC) with the Wenhai Scholarship, the highest prize given to graduates. After working for a few years, she was sent to study in Europe and then, in 1939, in the US. She had a great influence on her American workmates, who invited her to stay after graduatings. However, she refused. She wanted to serve the women and children at home.

Thinking of all the people in need of help, Dr. Lin opened a private clinic (诊所) after going back to China. She asked very little money to treat patients and often cut costs for poor

patients. At times she was even seen riding a donkey (驴) to faraway villages to provide medical care.

The new People's Republic of China saw Dr. Lin Qiaozhi playing a key role. In 1954, she was chosen to the first National People's Congress (全国人民代表大会). She was more interested in taking care of patients, doing medical research on care for women and children, and training the other doctors. "We care for two lives," she told new staff. "As doctors, we should be responsible for the patients and treat them as our sisters."

B站：小蓝书创作人　B站：小蓝书创作人　B站：小蓝书创作人

Though Lin Qiaozhi never married, she was known as the "mother of ten thousand babies", having helped mothers to give birth to over 50,000 babies in her lifetime. Dr. Lin did not stop working until the day she died, 22 April 1983. Since she had no children of her own, she left her money to a kindergarten (幼儿园) and a fund for new doctors. And even as she was dying, her final thoughts were for others. "I'm ready to go," she said. "Don't try to save me any more. Don't waste the medicine any more."

31．When was Dr. Lin Qiaozhi sent to study in the US?

_____

32．Why did Dr. Lin refuse to stay in the US?

B站：小蓝书创作人　B站：小蓝书创作人　B站：小蓝书创作人

_____

33．Where was Dr. Lin seen riding a donkey to provide medical care?

_____

34．According to Dr. Lin, who should doctors be responsible for?

_____

35．How many babies did Dr. Lin help mothers to give birth to in her lifetime?

_____

Passage 5

B站：小蓝书创作人　B站：小蓝书创作人　B站：小蓝书创作人

In the modern world, people have to remember passwords (密码) for everything from their email, to online banking and internet shopping.

So it's easy to understand that many of us would pick (选择) something and easy to remember.

A leaked (泄露的) Yahoo database (数据库) showed that the most popular passwords are still "123456" and "password". Easy ones like "qwerty" and "abc123" are also among the top 10, reported the *Daily Mail.* Other top passwords include "welcome", "sunshine" and

"ninja". Many more used simple combinations (组合) of their name, age, or birthday.

These people are trying to make life easy for themselves. But they are also making it easy for hackers (黑客) to break into their accounts, experts warned.

Researchers from UK's Lancaster University as well as Peking and Fujian Normal universities in China, did a test on passwords. They tried to guess passwords based on people's different personal information.

They guessed passwords for more than 73 percent of ordinary users' accounts. Hackers could even break a third of the harder passwords in 100 guesses, reported the *Daily Mail*.

So how can you make your passwords safer? Researchers from Bloom berg Business week have some tips for you.

Upper-casing (大写) your password is a good start. Adding numbers and/or symbols to your password can also be of great help. Choose a nine-letter password that includes numbers and/or symbols. This would take a hackers computer hundreds of years to break! Never use personal information as a password. Use different passwords for different accounts (账户). Experts suggest that a user should change their password every 90 days to keep hackers guessing.

49. 人们采取更多的措施保护野生动物是非常有必要的。(necessary)

_____

50. 直到失去健康你才会意识到它的重要性。(not… until…)

_____

51. We all avoid failure, and most of us fear it. However, without failure, success would be impossible. It seems that one cannot exist without the other. Accepting failure is not easy for many people, but things are slowly changing, especially in business and science. In the past ten years, for example, some scientific magazines have published reports of failed tests. It is believed that scientists can learn from “negative” results and that can finally lead to positive results. There is a lot we can learn by studying mistakes.
